

EVOLUTION OF OPERATING SYSTEM (1940 - 2020)

Made by: Diwakar Kumar

1940s - 1950s

NO OPERATING SYSTEM

- Manual program loading
- One job at a time
- Very slow processing

1960s

BATCH OPERATING SYSTEMS

- Jobs collected into batches
- No user interaction
- Better CPU utilization

Late 1960s

MULTIPROGRAMMING OS

- Multiple programs in memory
- CPU switches between jobs
- Higher throughput

1970s

TIME-SHARING + UNIX ERA

- Multi-user systems
- Each user gets time slice
- UNIX became popular and portable

1980s

PERSONAL COMPUTER (PC) OS

- Desktop computing becomes common
- MS-DOS and early Windows
- GUI starts growing

1990s

NETWORKING + OPEN SOURCE

- Windows 95 / 98 improve GUI
- Linux (1991) grows strongly
- Internet becomes common

2000s

MODERN DESKTOP + SERVER OS

- Windows XP / Vista / 7 growth
- Mac OS X becomes popular
- Server OS and security improve

2010s

MOBILE + CLOUD OS ERA

- Android and iOS dominate smartphones
- Cloud computing becomes standard
- Virtualization and containers grow

2020

SECURE + AI READY OS

- Remote-first usage increases
- Strong security updates
- Cloud-native OS + automation support
